

BIGTIME POS Accreditation Checklist

Prepared on April 13, 2026 for the current BIGTIME POS build.

Scope note: Requirement #5 was intentionally excluded based on the requested checklist scope.

4

Checklist items included

2

Items mostly ready in the system

1

Item that remains a manual requirement

1. Functional Checklist (Annex B)

PARTIALLY READY

The BIGTIME POS system already includes the core functional areas that usually support Annex B review, but the accomplished Annex B form itself still needs to be completed and submitted as a documentary requirement.

- POS transactions, receipt flow, and audit trail are present.
- Reports, BIR, and EIS modules are present.
- Offline sync, security controls, and cashier workflows are documented.

Repository evidence: docs/system-documentation.md and docs/bir-accreditation-readiness.md

2. Sworn Statement (Annex C)

MANUAL REQUIREMENT

This requirement is not generated by the application itself. The sworn statement must still be prepared, signed, and notarized outside the software as part of the accreditation packet.

- System features can support the content of the sworn statement.
- The notarized Annex C document must still be prepared manually.

Repository evidence: docs/bir-accreditation-readiness.md

3. System Description

READY WITH MINOR POLISH

The repo already includes a system description and user manual covering the software overview, architecture, transaction flow, cashier flow, security controls, offline behavior, and operations.

- System overview, architecture, and modules are documented.
- Transaction flow and cashier workflow are documented.
- Operational notes are present.
- A dedicated backup-procedures subsection can still be added if the evaluator expects it explicitly.

Repository evidence: docs/system-documentation.md and docs/user-manual-pos.md

4. Sample Receipts

IMPLEMENTED, NEEDS SAMPLE PACK

The software already supports receipt issuance and receipt-related audit logging. What remains is preparing the actual sample receipt outputs for the accreditation submission set.

- Online sales receive server-issued OR and reference values.
- Receipt actions support print, reprint, and email handoff.
- Receipt action events are synced into the backend audit trail.
- Submission still needs sample printed or exported receipts in the final required format.

Repository evidence: docs/system-documentation.md, docs/user-manual-pos.md, and docs/bir-accreditation-readiness.md

Overall summary: BIGTIME POS is strongest on System Description and Sample Receipts, is substantially aligned for Functional Checklist support, and still needs a manual Sworn Statement package for accreditation submission.
